Improve collaboration with scalable, agile cloud services and integrate with local servers to leverage existing infrastructure.

Minimize Time Spent on Information Management

M-Files lets you manage information based on what it is rather than where it's located on the company network. There is no need for migration since you can either store information in M-Files or connect to other systems and repositories — managing it in one view. M-Files lets you manage both structured data, like customer data, and unstructured content, like documents, images and emails. Users benefit from powerful tools to find, edit, share and organize content and information directly from SharePoint, Salesforce or any Windows application. Information is always in context and available for relevant personnel and for the task at hand, minimizing time spent on finding and managing information.

Automate Time-Consuming Document Handling Tasks

The amount of information is doubling every two years. That information comes in increasingly different formats and is stored in an increasing number of systems and repositories. M-Files uses artificial intelligence to analyze, categorize, and tag information automatically. The out-of-the-box and self-learning intelligence features let anyone reap the benefits of AI. Distinguish business-critical and time-sensitive data from clutter, and automatically classify and tag it to be able to focus on value-added operations rather than manual document handling.

Automate Office Work

M-Files supports multiple use cases across industries – even the highly regulated ones. Workflows and solution templates let you easily automate office work and integrate document management with business processes. You can upgrade your entire information management process across the organization. This way you never miss that important deadline or fail to follow established guidelines.
